1.1 Game Analysis

Michelin Stars of Another World takes place in a world where a Goddess has reincarnated numerous chefs to run a restaurant and attain as many Michelin stars as they can. The player will play as the chefs and to reach their goal of attaining Michelin stars, they will have to go to various regions, fight enemies along the way, and get a Michelin star from defeating the designated boss in that region. There will be a total of three chefs that can be played and each chef will have different attacks and abilities. By getting Michelin stars, the player will be able to get their restaurant reputation up and climb their way up on the leaderboard.

Since the player can play as different chefs, this game would offer replayability as each chef will offer unique gameplay. As there is a clear goal for the player to follow, players may want to see if they can reach the end of the game through playing other chefs and see how different the gameplay is. To make the game more fun for the player, there will be difficulty scaling which will increase by each region. The player will encounter unique enemies that are based on the level. Lastly, to make the game more forgiving over failing a level, there will be checkpoints at certain sections in the level which can be activated by stepping over them. The main aspect that will make this game fun for players is the usage of different characters that will allow the player to explore parts of the levels that couldn't be explored before.

1.2 Concept Statement

A Goddess has reincarnated you as a chef and your job now is to increase your restaurant reputation and get Michelin stars. Along your journey, you will be going to several different regions, fighting rival restaurant staff, and using your platforming skills to reach the final boss of that region, defeat them, and receive your Michelin stars. Your goal is to make your restaurant the top ranked through the leaderboards and to go higher in the leaderboards, players must collect Michelin Stars.

1.3 Genre

- Platformer
- Run and Gun

1.4 Platforms

This game will be available on mobile, and PC. In the future, the game will expand to include Playstation, Xbox, and Nintendo Switch.

1.5 Target Audience

- Casual Gamers: These types of people usually play any type of games and their preferences are wide. As long as they don't have to place their full attention onto the game, they will likely have a more enjoyable time. This game will attract these types of people as the game can be played without much stress and although there is difficulty scaling, the increase in difficulty shouldn't be too big. Since there will be an energy system, it will allow casual players to play a certain amount of time, to make sure they don't get burnt out, and likely come back at a later time which will help maintain player retention.
- Cloud Gamer: These types of people usually like playing games that are free-to-play and don't require much hardware. Since this game is free-to-play and will be available for mobile, cloud gamers will likely play this game, especially since they can easily play it using their own phones.
- Time Filler: These types of people like to play games that will help pass time and have easy to learn gameplay. Since the gameplay for this game is simple to learn and will be available for mobile, time fillers can easily pull out their phones and play this game to pass time. Also, since one of the monetizations in this game will focus on the limitations of how long people can play the game using an energy system, this will likely persuade time fillers to pay for energy if they want to pass more time.

1.6 Competition

Two games that are also 2D action rpg games that can be seen as similar to this game are Hollow Knight ' and Castle Crashers. Castle Crashers may not be seen much as a competition now compared to the past where it was more popular but the combat system in that game is very similar in Michelin Stars in Another World (MSIAW) in terms of each character having a primary attack and an ability which differs depending on the character that has been chosen. The unique difference in Castle Crashers' combat system compared to MSIAW is that each character in Castle Crashers can increase their stats upon leveling up and can formulate special combos. Although MSIAW will not have anything related to special combos, it will have a food consumption system that will allow characters to increase their stats. Hollow Knight would be considered a more prominent competition currently and especially since it is a 2D sidescroller like MSIAW. Hollow Knight is well known more its movement mechanics in which MSIAW can match with the implementation of movement related special abilities. Also, since MSIAW will be available to mobile and console games, MSIAW and Hollow Knights can easily be seen as rivals.

1.8 Storyline & Characters

The story starts off with the Goddess, also known as Hestia, loses her rule over the culinary world after her number one restaurant gets overthrown by a group of chefs with demon lord Ramses leading them. With the result of taking over the restaurant, Ramses is now able to hold the golden spatula and has full control over the world. After being forced to restart her career in the culinary world, Hestia decides to reincarnate chefs from other worlds and have them run a new restaurant with the aim of gaining as many Michelin stars, making the restaurant the number one food place, and help Hestia get back the golden spatula. The characters start off with a restaurant with no reputation and to increase it, the chefs will beat up rival restaurants literally and defeat the rival head chef to attain Michelin stars. Ramses is the final boss necessary to defeat to allow Hestia to become the ruler of the culinary world once again.

Characters:

Character	Description	Misc. info
Fuego	In their previous life, Feugo had a passion for spices. She would travel around the world in her previous life trying different spices from various cultures. Fuego had a particular interest in all spicy things, she would try many times to create her own signature spices and sauces. Fuegos life was cut short when she made the spiciest hot sauce ever created, so hot that it killed her upon consumption. Fuego was now gifted powers to be able to use his love for spice in boosting herself for the battlefield. If Fuego promises to help Hestia she will provide him the necessary	Normal Attack: Fuego will throw bottles of his signature hot sauce that will damage enemies causing burn damage over time. Special Attack: Fuego will explode and any enemies around her will take heavy damage.

	resources to discover the new spices in this culinary world.	
Ganache	Ganache during her previous life was a baker who particularly loved baking sweets. Ganache stood out amongst the crowd with her signature icing that was so sweet it had everyone waiting in lines to buy her creations. However, she was a perfectionist and knew she had not created the perfect icing yet. She dedicated her life to creating the perfect icing but sadly she was never able to fulfill her dream. She had died of old age pursuing a dream she could never accomplish. Hestia had told Ganache that in her world she can have the powers to fulfill her dream and in return she would work in Hestia's restaurant. Now Ganache uses her icing to help Hestia while finding the perfect ingredients for her ultimate creation.	Primary attack: Ganache shoots icing bullets from gun that damage enemies in front of her. Special Attack: Ganache switches to her secondary fire that shoots icing in a straight line that damages and slows enemies that are attacked by it, if an enemy is hit for 3 amount of seconds they will be delighted by the icing and be temporarily stunned.
Charlotte	During her previous life she was a baker who lived in a small town in Japan named Darkwater where she made breads, pastries, pies, cookies and other goods. But she was mainly known for her hard cakes she lived a humble and modest life she lived by herself for most of it because when she was young her family was killed in a fire she	Primary attack cake Shield : Charlotte uses her cake powers to make a cake Shield to ash her enemies while protecting herself and Friends Special attack: Charlotte places a cake shield beneath her that acts as a jump pad.

	was mostly lonely and quiet most of the time due to this event she wished she had the power to have kept her family alive she lived most of her life was spent honing her skill she only had one and only dream and that was to one day have a big family and friends but before her dream could come true she tragedy died at the age of 35 due to a unknown illness she died alone when she was sent to the other world she met Hestia she had told Charlotte that in her world she can have the powers to fulfill her dream and in return she would work in Hestia's restaurant. Now Charlotte uses her cake powers to protect her new friends	
--	--	--

Enemies:

Server Rat (Tutorial enemy)	- Stands still - Deals no damage - 7 hitpoints
Server Rat	- Melee enemy - Walks Around aimlessly - Deals damage to players upon physical contact. - Deals 1 damage - 7 hitpoints

Chef Rat	- Ranged enemy - Targets the player and throws their pan at them. - Moves around as a non-aggro enemy - Becomes aggro once it detects the player - Each pan deals 1 damage to the player upon contact - 6 hitpoints
Fire Rat	- Melee enemy - Moves normally as a non-aggro enemy - Once it becomes aggroed by the player, it moves 3 times its normal speed. - Does not target player but rather moves left and right at fast speeds - Deals 2 damage to the player upon physical contact. - 5 hitpoints
Rat King	- Boss enemy (Melee and ranged) - Spawns minions - Minions are same enemies the player has encountered in level one - Spawns 3-5 minions - Minions have 3 hitpoints. - Jumps up and lands on top of player - Jumps where the player has been 1 second before beginning the landing animation. - Deals 3 damage - After landing, the boss stays at the landed spot and does nothing for 5 seconds to recover stamina - Throws pies at player - Pies deal 1 damage. - Swings Golden Pan at player - Golden pan deals 2 damage - 100 hit points

1.8 Gameplay

Overview of Gameplay

Michelin Stars in Another World is a 2d run and gun platformer with a mixture of rpg and some strategy. This game will be different compared to other run and gun platformers due to this game focusing on the Michelin star system. For more specification, the Michelin stars system will help in leveling the restaurant which will help with reputation and unlock more Michelin Tours for the player to complete. Since this is a single player game, a mode that will be implemented is the “Leaderboard” mode where players will be able to see their restaurant reputation and see where they are placed on the leaderboard. The other mode will be called “Michelin Tours” which will be where the majority of the gameplay takes lead. While in the “Michelin Tours” mode, players will be able to select regions and the levels within the region so they can complete each region and collect their Michelin Stars.

Player Experience

Upon entering the game, the player will be introduced to the game’s story and what the objectives are for the playable characters. There will be three characters in which the player can choose from and that is when the player will start their journey. The player will be guided to the leaderboard to see their purpose in playing this game. The player will then enter the first level/tutorial level where they will learn the mechanics of the game and how to beat the level. After they go through the first level, the player will then be introduced to a new character that they will choose and replay the first level with. After replaying and completing the first level with the new character, the player will be guided to the gacha system where they will attain a new character. The player will use this new character in the boss level to see how different their experience is compared to the other two characters they have tried already. From then on after completing the boss level, the player will have free reign to choose how they will play the game.

Key Moments

First key moment is when the player meets Hestia so they get an understanding of the lore of the game and why they are going on all these adventures to help her. Second keypoint is the player encountering the michelin star that is out of reach on the first level to show the players that repeating the level is a core part of the gameplay loop. Third keypoint is the showcasing of the leaderboard to show how the collection of Michelin Stars not only serves a narrative purpose but also a social status for the player to show off to others. Fourth keypoint is the summoning of Fuego to show the player that there will be future updates to the game of adding characters that

will change their gameplay loops. Fifth keypoint is the final boss fight to show the game will not only focus on platforming but will have engaging boss battles at the end of the exploration in each region.

Player Objectives and Progression

The player represents the manager within Hestia's restaurant. As the manager the player is responsible for deciding what characters/employees they bring for any given level. Any progression within the restaurant is purely done through the strategic decisions from the player. When the player loads into the game their knowledge is limited to Hestia's backstory involving her previous title of holding the number one restaurant and her desire to gain her prominent status once again. The player is also aware that the characters they will control are reincarnated beings from another world. The player's goals are to collect Michelin Stars that are hidden throughout each level in order to increase their player rank amongst the other players who are in the game. Upon collecting Michelin Stars there are several worlds that they must progress through in order to make progress in the game's story. Players will also have the option of collecting resources through means of logging in to complete challenges every day, beating levels, playing limited time events and other in-game challenges to earn a premium currency with the goal of obtaining different characters to use for their game. Characters that are not given through the game are not necessary but will offer different play styles along with a charming character to add some variety to the game.

Gameplay Guidelines

Will Have	Will Not Have
● Restaurant related themes for enemies ● Knock-off names of restaurants ● Gacha System ● Energy System ● Local leaderboard ● Starter Selection ● Replayability ● Difficulty Scaling ● Checkpoints	● Exact names of restaurants ● Blood ● Use of Profanity ● Trial by Death ● Harsh Penalties

Game Objectives & Rewards

The objective of the game is to gain Michelin Stars from the Michelin tours, increase the restaurant's reputation, and become the ruler of the culinary world. Below is a table that explains how the gameplay will motivate the player to continue playing.

Rewards	Penalties	Difficulty Levels
• Rewarded upon collecting stars scattered throughout the level. • Gains a large sum of Michelin stars from defeating the boss of the level. • Players will go up on local leaderboards upon increasing their food truck reputation. • Players will have a new respawn point upon passing a checkpoint which will prevent them from starting in the beginning.	• Players will lose Michelin stars obtained in the level upon dying or game over. • Players will gain less Michelin stars upon replaying a level. • Players will have to respawn upon losing all lives. • Players will respawn at the last checkpoint upon falling off the map. • Players will lose reputation the more times they lose all lives.	• Difficulty will be based on which region the player is in ◦ Ex. First region will consist of tutorial levels/easy levels. • As players explore more regions that are unlocked when increasing reputation, the level difficulty will increase. • As level difficulty increases, there will be harder enemies, more obstacles, and less checkpoints. • As level difficulty increases, the overall level size will increase. • Some enemies in higher levels will deal more damage compared to the beginning levels.

Gameplay Mechanics

Game Modes	
Michelin Tours	Objective: Gain Michelin stars by progressing through the level, defeating enemies, and defeating the boss. Players will pass through obstacles within the level, collect stars, defeat enemies, and defeat the level's boss.
Leaderboard Reputation	Objective: Increase restaurant's reputation and unlock more regions in the Michelin Tours. Players will increase their restaurant's reputation by using the Michelin stars they attained through the Michelin Tours and unlock more regions so they can continue on with the next tour.

Scoring System	
Michelin stars	Michelin stars can be attained by being collected throughout the level as they will be scattered around, by defeating the boss, and by completing certain conditions when completing the level. These stars can be used to increase the restaurant's reputation which will allow players to go up on the leaderboards.

Systems & Features

- For character creation, all characters should have unique origin stories (who they were) and since they get reincarnated into this new world, they should also have their death before reincarnating be food-related or related to their origin. As for their abilities, they should also be related to their origin stories as they will consist of what these characters specialized in their past life.
- In terms of combat, player mechanics will consist of a primary attack and a special ability which can easily be used upon pressing a button which will vary depending on the system

the player is playing on. The primary attacks for each character will have different rate of fire, shot length, attack style, and attack damage. Special abilities for each character will vary depending on the playstyle that the character will influence onto the player (some being passive while others are more aggressive) and abilities will have certain cooldowns after being used. Generally, melee characters will deal more damage than ranged characters and have more robust special abilities due to their playstyle being more risky. Ranged characters, on the other hand, will have a more passive playstyle but their abilities will allow them to play closer to the enemies.

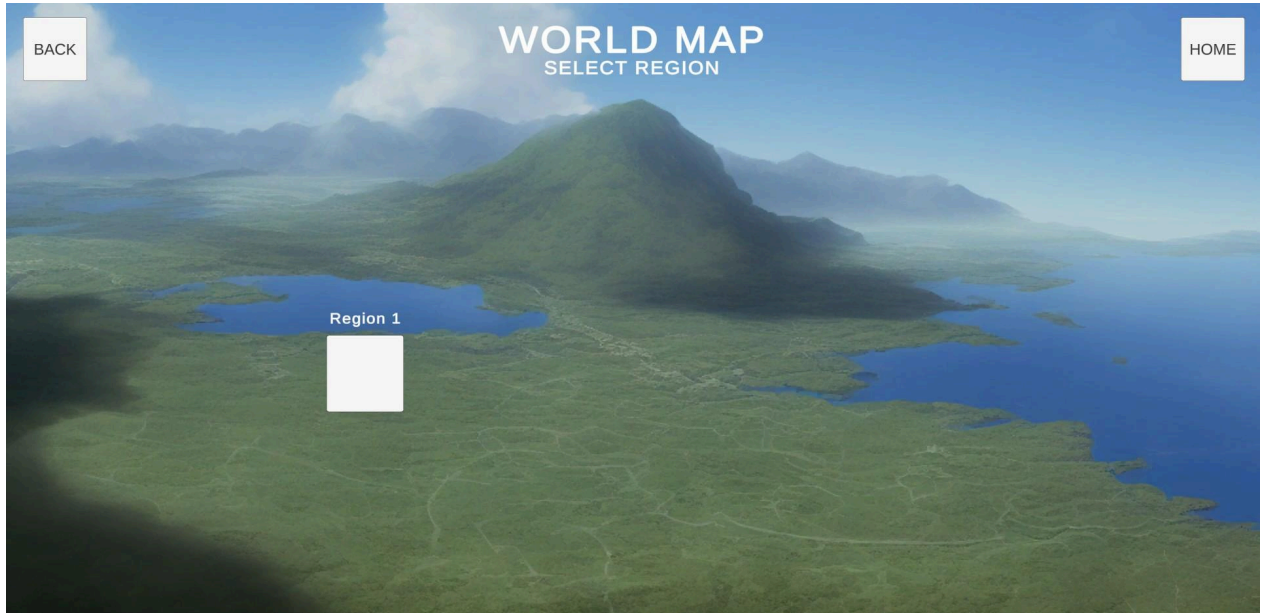

- Majority of dialogue will be in the style of visual novels with voice overs which will help the player follow through the purpose of the game as well as follow along with the story.

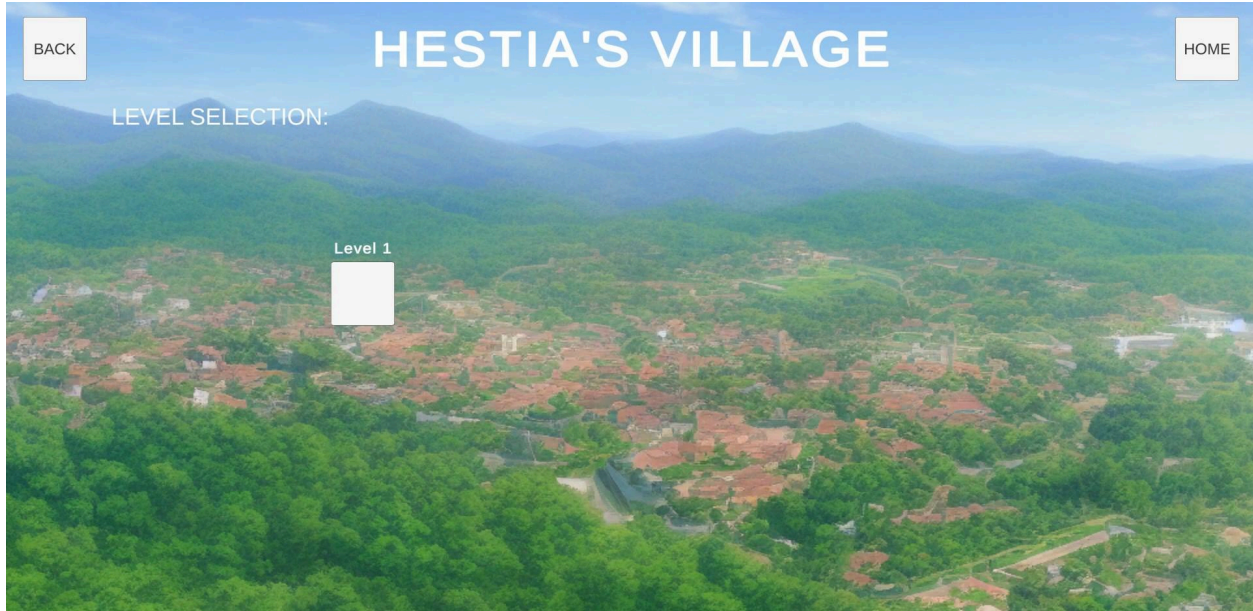

- The leaderboards will be based on how many Michelin Stars the player has and it will be heavily focused. The Reason for this is to give the player an incentive to explore regions and levels more while also keeping them retained. At the moment there are no online leaderboards but will exist in the future which will increase the competitiveness that this feature brings.

- Michelin tours will have levels within regions which will have different types of set enemies and a boss that players will look forward to fighting as they begin making their way to the boss level. Levels within the region will vary from a small amount at first to give the players a quick runthrough on the game and the amount of levels will increase as players advance to the next region.

Level Design

Levels	
Taota Region / Level 1: Hestia's Garden -> Village/Market	- Tutorial Level - Introduces the objective and the mechanics. - Garden inside Hestia's village. - Only grass with blue sky and some clouds in the background - Village Houses in background - Bright day - Market stands in background - Food boxes as obstacles - Markets stand roofs as obstacles - Rooftops and balconies as obstacles - Enemies that only move left and right. - Some enemies that shoot very slow at random directions. - Very little hazards - Only some small gaps to introduce players to hazards. - Towards the end, it will show rival restaurant
Taota Region / Level 4: Boss Level	- Throne Room - Dark colored floors. - Floating platforms for the player to jump on. - High platform only meant for the boss to jump on. - Very minimal to zero obstacles on the

	surface.
Neshimo Region / Level 1: Desert	- Level difficulty scales slightly. - Objectives are the same; collect Michelin stars, ingredients, and defeat all enemies. - Mixture of enemies that move left and right and enemies that now target the player. - Mixture of enemies that shoot at random directions and enemies that target players with faster projectile speed. - Slightly more hazards. - More gaps that players can fall through - New hazard: quicksand - Players will slowly descend until they are engulfed which will result in game over. - Players will have limited time to jump out of the quicksand .
Hosh Region / Level 1: Forest	- Rainforest setting - Lots of trees and bushes. - Objective: collect Michelin stars, ingredients, and defeat all enemies. - New melee enemy: this type of enemy will rush towards the player once it detects them, move at incredible speed, and will be flailing their melee weapon around until they lose track of the player. - Very small number of enemies that move left and right. Rushing enemies and enemies that track the players will most fill this level. - New range enemy; this enemy will be a long range type that will lob their projectile in an arc, with the projectile landing around the player. - Accuracy is low for this enemy - Very little enemies that shoot randomly. The level will be mostly

	filled with ranged enemies that track the players and those that lob from long range. - Moderate amount of hazards. - Hazards will include animal traps that damage players or hinder player movement.
Glastin Region / Level 1: Ice	- Icy mountains in the background and snow. - Objective: collect Michelin stars, ingredients, and defeat all enemies. - New melee enemy - Will have a large melee weapon and will attack slowly but damage is high. Damage = two hitpoints. - If the attack doesn't land but the player is near the radius of the attack, player movement will be slowed for a short amount of time. - Melee enemies in this level will consist of the new enemy, rush enemies, and tracking enemies. - New ranged enemy - Close range frost attack that will act like an ice thrower. - Player will lose on hitpoint after being continued to be in contact with the frost attack longer than 2 seconds - Ranged enemies in this level will consist of tracking enemies, long range lob enemies, and close range frost enemies. - Hazards will consist of slippery ice, icicles that fall from above, and spiky floors.

1.9 Control Scheme (Mobile and PC)

Due to the crossplay feature of the game keys used on the PC version will be replaced by buttons on the touch screen. However, these buttons are still visible on the PC version of the game and can be clicked on.

Mobile:

- Movement
 - Joystick for left and right movement as well as climbing up and down ladders
 - Button for jumping
 - Button for character base attack
 - Button for character special skill attack
 - Positions can be swapped for player's preference (joystick left, buttons right/joystick right, buttons left)
- Menus and other features
 - Labeled/Icon buttons around the screen (non-configurable)

PC:

- Movement
 - WASD keys for left and right movement as well as climbing up and down ladders
 - Space for jumping
 - Left mouse click for character base attack
 - E key for character special skill attack
 - All keys can be reassigned for player's preference
- Menus and other features
 - Escape key for main menu
 - Number keys for other menus
 - All keys can be reassigned for player's preference

2.0 Game Aesthetics

The entire game is very anime focused and thus has an anime aesthetics. However, like most gacha games, there are actually two different game aesthetics: a chibi art style for gameplay and a normal anime one for everything else.

Art Tasks

In menus:

- All menus have standard anime aesthetic, some specific character will have Live2D art to make the character feel more alive

In gameplay:

- In the gameplay, all character except for certain enemies and bosses will be of a chibi art style
- The background as well as environment would be of normal anime style

User Interface

As stated before, the player navigates through a main menu before getting into the gameplay. To navigate around the game system, there will be buttons that are either labeled with words or icons to open different screens and menus for the player to use. The largest and most prominent of all buttons on the main screen will be the button leading the player to the gameplay. For mobile all buttons can be pressed directly on the screen. For PC players they can either click on the buttons using the mouse or press one of the designated number keys to quickly access the specific desired menu. Other than menus and gameplay, the only other unique type of User Interface are for the cutscenes. The cutscenes are the same as those of visual novels. There is an anime styled background, characters in the foreground and a dialogue box near the bottom. The player taps the screen (Mobile), clicks the mouse (PC), or presses spacebar (PC) to speed up the dialogue text and continue to the next dialogue.

Sound

For music, the majority of the screens and levels will consist of joyful music which will give the players a nice, relaxing feeling as they play the game. The types of joyful music can vary to be march-like, very legato, or triumphant. Every level within the Michelin Tour will have march-like or any uplifting music that will keep the player motivated to keep on going. As players reach the boss, the music will turn slightly more intense to let them know that this section of the game is where they will have to concentrate the most. Once a level has been completed, players will be introduced with triumphant music which is a signal that they have completed the level and can relax. For in-game sounds for playable characters and enemies, the sounds will consist of sound effects for jumping, moving around, throwing, dealing damage, and taking

damage. For ranged weapons, they will have simple sounds like a pop or a ding whenever the projectile hits their target which the players won't find too obnoxious. When players collect Michelin stars, they will hear a positive sound with a moderately loud volume that will let them clearly know they collected one.

Sound/Music	Description
Standard Level Song	Something upbeat and cheerful if it helps these levels will be in a garden and a Village
Boss part music	Something something mellow and fun this levels main boss is the rat king:
Main menu theme (all menus)	Something calm and relaxing
Buttons pressing sound effect for menu	A sound that plays when pressing a main menu button try to make the sound like this
Picking up Michelin stars	The sound that plays when picking up Michelin stars in game
Jumping sound effect	The sound that plays when jumping
enemy death sound effect	Try to make it sound like a rat dying but not too deep
unit summoning sound effect	The sound that plays when summoning a unit in the gacha store
Player taking damage sound effect	The sound when the player or enemies take damage
Footsteps sound effect (1 standard one)	Sound of walking on dirt or concrete
Enemy throwing pan (2 sounds)	Woosh (slower and softer than example) and Impact
Ganache throwing an icicle	Knife throwing sound

Ganash ice thrower	Flame thrower but ice
Charlotte bringing out a cake	Growing noise (enlarging noise)
Charlotte hitting people	Soft Impact noise
Fuego throwing hot sauce molotov	Whistling through air and impact
Fuego explosion	Large explosion
Exiting level sound effect	Quick and short sound
Hitting back button or home button sound effect	Like tapping on a screen or solid surface.
Error sound effect when insufficient funds or function not available	Negative and short sound (like when someone gets a wrong answer in a game show).
Flame Rat charging at player sound effect:	Deep whooshing noise
Boss taking damage	Deep grunt
Boss impact with ground when jumping	Mini and short explosion sound
Boss dying/KO sound	Deep groan
"Magical" Reveal Sound	Twinkle sound
